DETAILED ACTION

1. Figures 1 and 2 should be designated by a legend such as --Prior Art-- because only that which is old is illustrated. See MPEP § 608.02(g).
2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371© of this title before the invention thereof by the applicant for patent.

3. Claims 1-7 are rejected under 35 U.S.C. 102(e) as being anticipated by Takagaki.

Takagaki discloses a set discharge tray in which a collating station (21) having a set of guide members (25) and a support means (36) receives sheets from a first conveyor means (47) and discharges the sheets by an actuator member (30) through a second conveyor means (48).

Regarding claim 5, the use of the terms "or set of rollers" renders the claim anticipated by Takagaki.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3651

5. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art in view of Ito et al. (JP 52097744A). On pages 1 and 2 of the specification, the applicant discloses a known collating device which possesses all the limitations of the claims, but it does not disclose a support means for supporting the sheets in the collating station. However, Ito discloses a sheet inverting device which includes a support means for supporting the sheets in a collating station for the purpose of supporting the sheets. It would have been obvious to a person of ordinary skill in the art at the time of the applicant's invention to modify the known collating device by including a support means for supporting the sheets in a collating station for the purpose of supporting the sheets.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patrick Mackey whose telephone number is (703) 308-0630.
